Institute for Mind, Drugs and Behavior,
Loyola University Medical Center,
Maywood, Illinois 60153.

Dear Alex,

We have had two reviewers read your report "Brain Acetylcholine and Seizures" which you submitted for the ECT volume. As you know, the substance of the report is important and of great interest. The presentation was most difficult to follow however, since the written text seems to follow the verbal presentation. Lacking your ability to emphasize, we have found it difficult to follow, and have taken the liberty of making some suggested changes. I have had the text retyped and enclose your original edited copy and two xerox copies of the retyped version. I would be most grateful if you would read this promptly and make such corrections as you may wish. Can you return it to me within ten days?

My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
