Dear Bill,

RE: AHR-1900

Please amend our protocol for the study of AHR-1900 as follows.

Dosage will be increased to 200 mg daily, and will be maintained for periods up to four weeks.

The rate of administration of medication will be daily increments of 10 mg for three days, 20 mg for three days and 40 mg a day thereafter (a possible schedule is 10 - 20 - 30 - 40 - 60 - 80 - 100 - 140 - 180 - 200).

We have observed no changes in blood pressure which would make us hesitate on such a rapid increase.

My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
