

November 4, 1964

Dr. Dean Clyde
Biometric Laboratory
University of Miami
250 Bird Road,
Coral Gables, 46, Florida

Dear Dean:

We are looking to having you visit with us on ¹⁶⁻¹⁷ November ~~11-12~~ ¹⁷⁻. In addition to visiting on November ~~11th~~ with us here, I will try to arrange a visit at the new medical computing group at Washington University.

On Friday, I was reminded by my secretary that the deadline for contributions to the Eastern EEG Society was about to pass and so I quickly wrote the enclosed abstract. You may recall that last winter, following your teaching session, you were kind enough to carry out the discriminant function analysis by diagnosis on the Hillside Hospital EEG data. Subsequent to that time, Dr. Itil and I went over the EEG records themselves and the results is the enclosed abstract. I have taken the liberty as listing you as a co-author, and hope that my interpretation of the data sheets is correct. I would like to set aside some time during your visit to go over this abstract and our data, As one example of the kind of manipulations to which frequency data lends itself.

My best regards,

Sincerely yours,

Max Fink, M.D.
Director
