Dr. Athan Karras
558 Harley Drive
Columbus, Ohio 43202

Dear Dr. Karras:

Dr. Pasamanick was kind enough to recommend your appointment to this Department. At the present time, the experimental psychology programs are undergoing their development. You may know that Dr. E. Roy John has a laboratory at this College and that many of the experimental neurophysiological approaches with which his name is associated are now being applied in the clinical psychiatric population.

Concurrently, I am interested in developing a variety of experimental psychological tasks in the study of new psychotropic compounds in our patient population. In this program, I believe we would be most interested in reaction time measures and in an attempt to relate them to the changes in the scalp recorded electroencephalogram.

I am impressed by Dr. Pasamanick's recommendation and by the titles of your publications. If either of these study programs mentioned above are of interest to you, I would be glad to process this further.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
