

January 4, 1970

Dr. Allen P. Berger, M.D.
Associate Director
Pfizer Pharmaceuticals
Groton Connecticut

Dear Allen,

Enclosed are the FD 1573 for the study of thiothixene/
thioridazine/placebo in anxious subjects in the partial hospitalization
program at our College. This study has met the approval of the
relevant local committees and will be presented to the Research
Committee at its meeting later this month. I believe the study
can begin as soon as the supplies are made available.

We will submit a request for support for this study,
based on the anticipated completion of 30 subjects before the end
of the year, of \$10,000, plus \$3,000 for College overhead. In the
event the study is not completed, the support will be negotiated.
Payment is to be made at the end of the study.

Enclosed also are Form FD 1573 for the thiothixene capsule
study in children and adolescents, following the protocol we submitted
some months ago. It is my understanding that as soon as it is
feasible, you will reconsider the possible use of thiothixene in
concentrate form in this study.

Many thanks for your cooperation, and my best wishes for
a successful 1970.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
