Costas Stefanis, M.D.
Department of Psychiatry
Eginition Hospital
74, Vasillissis Sophias Av.
Athens, Greece

Dear Costas,

We have received the additional data from the acute administrations of cannabis to the chronic hashish users, and will proceed immediately to the analyses of these data, and their correlations with the EEG material previously analyzed.

It would be most helpful to the project to have Dr. Liakos work with us in New York. During my recent visit, I was impressed with his knowledge of the details of the experiments, and as the analyses proceed, it will become increasingly necessary to evaluate each analysis before proceeding with the next. With this view in mind, I am hereby extending an invitation on behalf of the Association for Dr. Liakos to visit with us for a number of weeks during July. Separately, I am enclosing a direct invitation for his use.

Steve Szara called on Friday to tell me that the supplies of high concentration THC- marijuana were inadequate for our use; and offered a supply of hashish of high THC concentration. There are some details that have to be clarified, and I have been in daily communication with him. As soon as the material is available, I will call you.

I look forward to your visit later in the year, and that of Dr. Liakos next month. I am confident that we will be able to carry out the analyses as we discussed.

My best regards.

Sincerely yours,

Max Fink, M.D.
Executive Director
