Dear Ross,

I want to take this opportunity, once again, to commend your presentation. As I mentioned, I am now preparing a report discussing the problem of dissociation of EEG and behavior with anticholinergic drugs, and it would be most helpful if I could summarize extensively and accurately the experiments you described.

I would, therefore, be most grateful for a preprint (and the citation) describing the moment to moment correlations of EEG and behavior with LSD.

Many thanks.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
