

March 22, 1968

Dr. Roger Meyer
National Institute of Mental Health
Bethesda, Maryland

Dear Roger,

Miss Spiro called today and I tried to answer her questions. Enclosed is a final draft of "Behavioral and EEG Studies of Naloxone in Heroin Dependence" as submitted to Clinical Pharmacology and Therapeutics.

While we have been told that ENDO will once again produce naloxone, the approximate date is opened.

The present cyclazocine study program is in its final year and further studies will continue in the event the New York State Narcotic Commission is willing to provide financial support.

It has been an interesting experiment and I trust that this report is helpful in the forthcoming presentation to Congress.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
