Richard Resnick, M.D.
New York Medical College
New York City

Dear Richard,

In June, I received the enclosed material from Dr. R. Mechoulam of Israel. I could not decide whether I could look at the project then, with the summer coming on. It is clear today that you are much better equipped to do the study than I, and I am sending the material to you, hoping that you will become interested. We ~~wahl~~ do what we can to assist you, but the need for special licenses is a hurdle that is too great for me at this time.

I did contact Drs. Braude and Szara, and they were unresponsive.

From the EEG point of view, the study would be of special interest as another test of the EEG/behavior association hypothesis. The clinical features are the most interesting, however.

My best regards.

Sincerely yours,

Max Fink, M.D.
