Drs. J. Volavka and M. Matousek  
Psychiatric Research Institute  
Prague 8, Czechoslovakia

Dear Drs. Volavka and Matousek:

I have written to Dr. Roubicek to thank him for his many kindnesses during my visit but I am also taking this opportunity to thank you for your frankness and the welcome you extended during my visit last week. I hope that it will be possible for you to come to New York for I think that you will enjoy your experiences here and I believe we can make some contributions to quantitative electroencephalography.

I am taking the liberty of enclosing a copy of the book written by Dr. Itil. This was written as his thesis for the professorial examinations. It deserved a better review than that given by Dr. Goldman and is, in my opinion, the best available summary of a very difficult subject. Someday Charles Shagass will write a summary of his work and the two together will provide the corner-stone for the neurophysiological classification of subpopulation for the medically ill.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
