

June 21, 1967

Dr. Zdenek Votava
Professor of Pharmacology
Medical Research Associate IV
Galesburg State Research Hospital
Galesburg, Illinois 61401

Dear Dr. Votava:

Despite its hectic nature, my associates and I were grateful for your visit with us. Even though there are some differences regarding our views of EEG and behavior, I think that fundamentally we agree much more when we say that brain function and its changes are critical to behavior.

I would be pleased if you would accept this honorarium for your visit with us.

My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
