Johannesburg, South Africa

Dear Andy,

Friday we answered your earlier letter, but I don't think I sent you the Itil/Keskiner scale. Enclosed is this scale. I would suggest that you have these duplicated.

If you rate the patients in exactly the fashion that you did here it would be very worthwhile to show the changes with time. Remember that the more ratings we have for any one part of the study the better our chances of demonstrating changes. This has become very clear with the CDT study.

My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
