Gary Boyer  
Center for Studies of Narcotics  
National Institute of Mental Health  
5600 Fishers Lane  
Rockville, Maryland

Dear Mr. Boyer,

As Dr. Dornbush explained, we have become most interested in dissecting the different responses we have observed in chronic hashish users in Greece in smoking hashish, U.S. marijuana, and THC. The availability of concentrated THC- $\Delta$ -8,9, CBD, and CBN may provide an opportunity to dissect some of the responses of these 'tolerant' men.

Enclosed is the official BNDD order form, 222C for the substances requested, for use in studies under contract HSM 42-70-98, in Greece.

We will be visiting Dr. Petersen on Thursday, and if it expedites delivery, we can meet with you that morning.

Many thanks.

Sincerely yours,

Max Fink, M.D.
