Miss Anne Walker
15 Littel Road
Brookline, Massachusetts 02146

Dear Miss Walker:

Enclosed are some notes I wrote in response to your request, and a few reprints which reflect the actual data of interest to me. There is, of course, much more data, as in animal studies where electrodes and drugs are introduced into specific brain areas for specific relationships to behavior, in human studies with electrical techniques which are not used in my laboratory (as evoked potentials and contingent negative variation); and with drugs not usually defined as psychotropic (anticonvulsants, hormones, vitamins, etc.).

If these are useful or interesting, I would be pleased to have you visit the laboratory for a review of the methods; and to answer questions which must arise from such discursive notes.

The subject of brain function, drugs and electrical activity is an important one, and its story needs telling. I am terribly sorry that I am so poorly equipped, but perhaps your experience and talent can salvage this tale.

Good luck!

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
