Dear Bill,

Enclosed are 3 RPR's for our ongoing studies of heroin (diacetylmorphine), methadone, *l*-alpha-acetylmethadol, and cannabis.

The chemical formulae of two compounds you requested are not available. U 28774 is related to diazepam and is a *dl* racemic mixture of one of its analogs.

OI-63 is a peptide derived from the analysis of complex proteins. It is a pure crystalline substance but I do not have its formula. My guess is that it could go into 506 or 505.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
