February 13, 1975

Steven Roasen, Ph.D.  
Department of Psychology

Dear Dr. Rosen,

Enclosed are the better reprints describing both human and animal studies of the peptides ACTH 4-10. The summary paper by Van Riezen and Rigter was presented in July, 1974 and is the best summary of the work to date. The supporting studies by Kastin are enclosed also as these describe the studies of MSH derivatives which have the same amino acid sequence as the ACTH 4-10.

I look forward to hearing from you after your review of the data.

My regards.

Sincerely yours,

Max Fink, M.D.
