Jerome Levine, M.D.
Chief, Psychopharmacology Research Branch
National Institute of Mental Health
Rockville, Maryland

Dear Jerry,

We have been asked to examine the EEG profile of clomacran (SKF 14336), with a view to defining any unique properties of the compound. From the available data, it appears that the clinical studies are extensive.

It would be helpful for me to have an opportunity to read the summaries of the ECDEU studies of these compounds. Is it possible to request such a read-out ?

Many thanks.

Sincerely yours,

Max Fink, M.D.
