Dr. Joel Elkes  
Professor of Psychiatry  
Johns Hopkins University School of Medicine  
601 North Broadway  
Baltimore, Maryland 21205

Dear Joel,

I look forward to participating in the forthcoming session on delirium at the "Symposium on New Approaches in the Study of Clinical Manifestations of Human Infection and Allergy" on Friday, October 21, in Bethesda. As you requested, I would like to present some of the observations of the EEG changes in behavior. It may be helpful to describe the studies of others of alcoholic delirium and hepatic coma as these also demonstrate some other quantitative methods of EEG analysis.

Perhaps a more apt title would be: "EEG Changes in Experimental Delirium." I would like to use 2" x 2" slides to illustrate some of the findings.

I look forward to joining the discussion, and wish to thank you for your kind invitation.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
