June 14, 1973

Mr. Earl Ubell,
Director of News,
New York NBC News,
Channel 4, N.Y.

Dear Earl,

I regret very much missing you today, but I have a prior lecture on EEG and Drugs in Boston. I hope you enjoy your stay today.

After a number of years NIMH has issued a national call for laboratories to develop a long-acting narcotic antagonist. Now that the incidence of opiate use seems to be declining, a massive multimillion dollar effort is being launched. Perhaps it would be useful for the many methadone dependent persons that now dot the American landscape.

My best wishes.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
