Application of Dr. Taketomo

Dr. A. Freedman

Dr. M. Fink

Following our interview of 5/20/66, Dr. Taketomo sent the enclosed response to my inquiry as to the needs for equipment and funds, were he to be appointed.

In the interview he spoke of working with children, of continuing studies of methods of measuring metallic ions in the blood, and continuing his teaching, both within the Department and at the New York School for Psychiatry.

The requests are for equipment that is not available, and for a population that is not central to the present role models of the Department (as I understand them).

Recommendation: No action.
