Miss Alice I. Sandahl  
EEG Laboratory  
Veterans Administration Hospital  
Salt Lake City 13, Utah

Dear Miss Sandahl:

The Missouri Institute of Psychiatry is the research and training center of the Division of Mental Diseases. We have established a laboratory in electroencephalography which now consists of three instruments, special recording rooms, and a computer center for the analysis of EEG signals. Much of the work involves quantitative analysis of the EEG and we have, in addition, two frequency analyzers.

There is a position open as technician. The laboratory is in the City of St. Louis, with suitable accommodations in the vicinity of the hospital. If this opportunity interests you, I will be pleased to receive a copy of your curriculum vitae and a small photograph.

Sincerely yours,

Max Fink, M. D.  
Director
