Showa Ueki, M. D.  
Associate Professor  
Department of Pharmacology  
Faculty of Medicine  
Kyushu University  
Fukuoka, Japan

Dear Dr. Ueki:

Dr. Akira Yukitake of Fukuoka has requested an appointment in this Department as a Research Fellow. We have reviewed his curriculum vitae with interest, and are writing to obtain further information regarding his professional experience and abilities.

The programs in this Department are primarily of a clinical neurophysiological nature. However, we are now in the process of developing animal neurophysiological research laboratories, with specific emphasis on the effects of psychotropic compounds on brain function in dogs and other small animals.

We would be particularly interested in any comments you would like to make regarding Dr. Yukitake's ability to carry out independent research in clinical or experimental neurophysiology; his ability to participate in collaborative research programs; and specifically, his technical ability in neurophysiological research with dogs or cats. We are particularly interested in the problem of implanted electrodes in chronic preparations.

We would be particularly indebted for specific comments regarding Dr. Yukitake's ability in maintaining cogent conversations in English and his ability to communicate with his associates and assistants.

Thank you very much for your comments.

Sincerely yours,

Max Fink, M. D.  
Professor of Psychiatry
