Philip H. Bookman, M.D.  
Assistant Medical Director  
Hoffmann-LaRoche, Inc.  
Nutley, New Jersey 07110

Dear Phil:

We very much enjoyed our visit and I am pleased that we should be able to obtain the remaining blood analyses to correlate with the EEG data.

As requested, I am enclosing individual graphs of diazepam and bromazepam blood levels with the principal EEG variable, 18-25 Hz. I have also redrafted the table of correlations.

We are proceeding with a more detailed summary of the observations in our study using the present blood level data, and will send this summary as soon as it is prepared. We will complete the blood-level EEG correlations as soon as we have received the balance of the data from your laboratories as an addendum to the report.

I would be delighted to welcome you, Hank, and any of your co-workers to Stony Brook. My best regards,

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
