Oss, Holland

Dear Hank,

As the enclosed copies indicate, we have filed the IND for GB-94 and the extension of the OI-63 for Dr. Kastin. Dr. Kastin is free to begin the project; I have to wait at least until May 5.

The OI-63 experiments have continued until we have now given 7 (x13.5 mg) ampules in 9cc in 2 minutes. Even at these dosages, there is little to be seen in the visual EEG. We are reviewing the computer outputs and the symptom reports. In the latter, there are some suggestions of effects; and if these are substantial and matched by the EEG, we will do a direct comparison with placebo.

I have spoken to Dr. Essman, who received some supplies from you and will do the studies later this month. I have not spoken to Joyce or Iver.

My best regards to all your associates, and to your family.

Sincerely yours,

Max Fink, M.D.

P.S. The work at Stony Brook is going very well. I should close my laboratories in the city at the end of June. Also, we have found a small home on the water near Stony Brook, and we are in the midst of the negotiations now.
