Dear Sir:

The Department of Psychiatry has recently developed a digital computer facility for the study of neurophysiological signals and for other applications in psychiatry. The central computer will be an IBM 1800 which will be delivered early in May.

Among the special applications are those in information retrieval.

I am particularly interested in individuals who have an interest in computer programming with a medical background.

This position is in the laboratory at 102nd Street and Fifth Avenue in New York City. If this interests you, please call my secretary at 212 369-7900 Ext. 248.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
