Dear Professor Kanowski:

I am most interested in your studies of blood levels of Perzin and EEG effects. Some years ago, Itil and I tried such a study of butaperazine. We failed to find a correlation but thought this may have resulted as much from the problems of measuring blood levels as from the EEG measurement. In our studies of cycloserine, we did find blood level - EEG correlations; and others have reported similar correlations for lithium.

The reports you requested, and some others which may be relevant, are enclosed.

Many thanks for your interest.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
