Dr. Allen E. Hussar
Chief, Medical Service and
Associate Chief of Staff for Research
Veterans Administration
Franklin Delano Roosevelt Hospital
Montrose, New York 10548

Dear Dr. Hussar:

Thank you for your suggestion of studies of dextroamphetamine in schizophrenic patients, and the reprint of your work. The suggestion is very good and should be followed.

Our own program of study is focussed on the effects of drugs on the waking EEG. This permits me and my associates to have a more "normal" family life. There are many workers interested in the effects of drugs on the sleep EEG and these include Feinberg in New York, Kales at UCLA and Itil in Missouri. I am sure there are others, but I do not keep an ongoing file of sleep studies.

Thank you very much for your interest.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
