Voiceprint Laboratory  
Box 835  
Somerville, New Jersey

Gentlemen:

I would appreciate any information which may be available describing the Sound Spectrograph with specific emphasis on those applications in pattern recognition of data other than speech. We are interested in the identification of patterns derived from numeric scores of changes in brain wave patterns over a time. One of our consultants suggested that I write to you for some of your general descriptive literature.

Thank you.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
