Harris Isbell, M.D.
Professor of Medicine
University of Kentucky
Lexington, Kentucky 40506

Dear Harris,

Our studies in Greece have progressed to where we have written demographic reports for NIMH but have not condensed these for public presentation. We are now administering hashish, marijuana, and THC-delta-9 in cigarettes, with a THC-delta-9 content averaging 140 mg., and recording the physiological and behavioral effects. These data are being collected now, and the data collection should be completed by November.

Enclosed are some reports which may be useful, including the cannabis psychos~~is~~s, which has been published.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
