Mr. H. G. Barnard
168 N. Central Avenue
Clayton, Missouri 63105

Dear Mr. Barnard:

The dietary study reported concerned the control necessary in individuals having acute mental illnesses in an effort to determine if there may be changes in blood electrolyte during such disfunction. We have no study at the present time concerning allergies nor have we any plan for such an undertaking.

Thank you for your interest.

Sincerely yours,

Max Fink, M. D.
Director
