Dr. Eugene Laska  
Rockland State Hospital  
Orangeberg, New York

Dear Gene,

I look forward to visiting with you on Thursday. I will drive from New York and should be at your laboratories about 11:00 a.m. It would be fine to meet with Dr. Harper. The question that I wanted to discuss with George Simpson was the experiences with long acting fluphenazine. It is my impression that he has had experiences both with the decanoate and the enanthate forms.

At the time you called I was unclear but there was another scientist at your laboratories whose work we were replicating. I recalled my correspondence with Dr. Vitek. If he is available, I would like the opportunity to meet with him to discuss our cycloserine experiments.

I look forward to visiting with you and will bring a few 2 x 2 slides so that any discussion can be made more "scientific."

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
