

December 18, 1964

Abraham Wikler, M.D.
Department of Psychiatry
University of Kentucky
Lexington, Kentucky

Dear Abe:

One of my associates has recently become interested in the problem of tolerance to LSD-25 and we have read with interest your report in the June, 1964 Archives of General Psychiatry. In the references you indicate that a subsequent report will discuss the role of age and initial value on the LSD effect on pupillary size. If this report is in a form suitable to be read at this time, we would be grateful for an opportunity to see this data before working out the details of our study.

My best wishes for the New Year.

Sincerely yours,

Max Fink, M.D.
Director
