Dr. Peter Kellaway, Editor
EEG Journal
Baylor College of Medicine
Houston, Texas 77025

Dear Peter,

I am pleased to enclose our report "EEG and Clinical Change after Bilateral and Unilateral Electroconvulsive Therapy" for your consideration for the EEG Journal.

The issues of EEG changes and their relation to behavior have been of interest to clinicians for more than 20 years. This study contributes some novel data, namely the differential asymmetry with different electrode locations, and discusses the problems of using rating scales as behavioral measures in studies with EEG. In order to make the work of your reviewers easier, I am including copies of our last report dealing with this subject.

Thank you for your consideration.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
