

July 23, 1970

Dear Charlie,

How about skiing in Aspen in January ? As hot as it is, and on the eve of holidays in Europe, it is time to think of the ski season.

Richard Rech of Dartmouth has been asked by the organizing committee of the Brain Research conference group to organize a session on EEG and drugs in animals and man. He is inviting Wallace Winters and himself; I suggested that you and Turan be invited as well.

Would you care to discuss the EEG studies in man and animals, their correlations, similarities, etc. ? He would like to focus on the theories of EEG and behavior (association, dissociation) and your mission, if you accept it, is to bridge the gap between the animal workers and Turan and myself.

Date: January 18, 1971

Meeting: January 16-22

Place: Wildwood-at-Aspen

See you in Prague.

Max
