Dear Dottor:

The Department of Psychiatry of the New York Medical College is embarking on a series of new programs, among which is one dedicated to the evaluation of changes in brain function associated with psychopharmacologic agents. We are establishing a research laboratory in EEG and computer techniques of analysis. The drugs under investigation will be the majority of psychoactive agents, and the populations will be the acute mentally ill and narcotic addicts.

If such a study program interests you, I would be pleased to receive a copy of your curriculum vitae.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
