Dear Monique,

We are in the middle of an experiment using Delta 9 THC, 95%. The sample is identified as SSC - 66285, (ADL - 16122-35). Ten subjects are being used, each receiving, on separate occasions, two doses of 20 mg and two doses of 10 mg, making a total of 60 mg per subject. We started with a total of 800 mg of this material. However, a portion was used to ascertain the chemical activity levels at weekly intervals so that stability and an accurate method of delivery might be determined.

We now find ourselves in need of at least 300 mg more of this same material to complete this experiment. Enclosed is an IRS Form 2513 in this amount.

May I also take this opportunity to remind you of our request for 750 gms of marijuana leaf with a 1.5% Delta-9 THC concentration for the study of chronic effects which will begin in June. We need this material no later than June 10.

Thank you.

Sincerely yours,

idy

Max Fink, M.D.  
Professor of Psychiatry
