

October 8, 1968

Dr. James Inglis
Department of Psychology
Queen's University
Kingston, Ontario
CANADA

Dear Dr. Inglis:

Dr. Dornbush has shared your letter of October 2. Our study program of unilateral and bilateral convulsive therapy is in progress. As Dr. Dornbush may have told you, we have a wide experience with a variety of treatment methods.

Your letter suggests that you may have a new way of applying ECT and that you have written a review. It would be of interest to us to read this review, if copies are available.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
