Dr. Robert Ellingson, Secretary  
American Electroencephalographic Society  
Nebraska Psychiatric Institute  
Omaha, Nebraska 68105

Dear Dr. Ellingson:

I am pleased to recommend Dr. Kenneth Lifshitz for membership in the American Electroencephalographic Society. I have known Dr. Lifshitz and have been interested in his study program for the past six years.

During this time, he has established a psychophysiology laboratory at the research facility of the Rockland State Hospital. A major part of his studies has been devoted to rheoencephalography, and more recently, to the averaged cortical evoked responses. He has made significant contributions of both a technical and scientific nature to rheoencephalography and the quality of his work has been excellent. I have visited his laboratory and his ability to coordinate and develop technical equipment for the measurement of cerebral activity is extraordinarily high.

While he does not have the usual EEG training of a clinical nature, and though he may not do clinical electroencephalograms, I do believe that he can make significant contributions to the meetings of the Society. I would recommend his membership without reservations.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
