Dear Allen,

As I discussed, we are undertaking a study of various compounds in childhood disorders. For the reasons described in the protocol, which is enclosed, we desire to provide medication in liquid vehicle wherever possible. Our preliminary study of Navane (thiothixene) in concentrate form assures me of its activity.

Even with the necessity of filing an IND or any other FDA forms, I would like to request supplies of thiothixene concentrate 5 mg/ml sufficient to begin this study. May I ask for 50 of the 30 ml bottles with eye dropper and 15 placebo to start?

Thank you for your cooperation. My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
