January 14, 1971

Dear Peter,

Thank you for your two letters. I hope that you have overcome your illness-- it is a shame to miss the early classes, but I know that you will make these up.

The notes on the Clyde Mood scale were very helpful. I had already compared the output to the placebo scales and was sure that the CMS was helpful. Your suggestion of comparing the last five minutes of EEG to the CMS is a very good one, and I will try to keep it in mind as the data analyses proceed.

I have asked that you be reimbursed for your travel, and this should arrive in due course.

Your notes about the start of the placebo paper are good; but I am confused by the request for a return of the general summary you left with me. The summary I read, I believe I returned. I have made a folder on placebo/EEG/Irwin, and it is not there; nor is it at home; nor does Bruce have it. Are you sure I did not return my copy to you? If not, describe it again, please. (I'm embarrassed, because in the past I could always turn to Kathy and she would save me from an embarrassing memory).

Glasser has just appointed a research assistant to begin Feb 1, and I believe he will spend much time on the problems as outlined. We shall see something by mid-March.

Keep working and keep well.
