Dr. Stanley Feldstein
2700 Ken Oak Road
Baltimore, Maryland 21215

Dear Dr. Feldstein:

Voita has kept very busy with the EEG-cannabis analyses and is finding very interesting correlations. Indeed, he now claims that there may be an EEG-behavior correlation!

The heroin project has been held up by a shortage of heroin, but I wrote to Jaffe in the White House and was told the supply would be available on Monday. The project will then start.

I met Kurland in Mexico City and he remembered meeting you, but is not sure he needs help.

Enclosed is the health and accident policy of the association. Should you wish this coverage after January 29, you may elect to continue.

I have received my pilot's license - and it has given me much pleasure. I was flying today and look forward to an excuse in the spring to visit Baltimore.

My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
