

November 20, 1964

Dr. John Nurnberger, Chairman
Committee on Program
1100 West Michigan Street
Indianapolis, 7, Indiana

Dear John:

Attached is a short abstract regarding a panel that I would like to propose for the program committee's consideration for the 1965 meeting of the Society of Biological Psychiatry. In line with topic No. 1, I have taken the liberty of canvassing my associates and fellow scientists and would like to propose a panel on the subject "Anticholinergic Hallucinogens". The participants and their subjects are as follows:

Leo Abood: Biochemical Concepts of Anticholinergic
Psychotomimetics
Richard White: Compounds Affecting Cholinergic
Mechanisms - Induced EEG Changes
and Behavioral Patterns
Sam Gershon, Antagonists to Anticholinergic
M.B.B.S.: Hallucinogens
Turan Itil, Dissolution of Cortical Activity
M.D.: Induced by Anticholinergic Hallu-
cinogens.

I would propose that I chair this session and that a number of discussants be selected either by the program committee or the participants of this panel.

If this proposed panel meets with the committee's approval, I will be prepared to provide the necessary abstracts and to try to get the full papers by March 1, 1965 for the secretary.

I look forward to joining you in December.

Sincerely yours,

Max Fink, M.D.
Director
