Walter Sannita, M.D.
Laboratory of Neurophysiology
Ospedale San Martino
16 132 Genoa, Italy

Dear Walter,

First, I don't write for months, and here are two letters within a week. I write so soon to again ask a favor.

In today's mail, I received a letter from Prof. Franco Angeleri of the Ospedale Generale Regionale in Torrette, Ancona, recommending Dr. Marco Guidi for a fellowship in electrophysiology in my laboratory supported by a scholarship from the Italian government. After looking at the map and seeing that Ancona is closer to Genoa than to New York, by far, I took the liberty of writing to Dr. Angeleri, asking that Dr. Guidi meet you.

Would you interview him for us ? Since you know the situation here and have been through a fellowship, you can explain our principles and help Dr. Guidi understand what he is asking.

Please be free to tell him what you recall of the laboratory. As I wrote last week, most of my time is now spent in clinical activities, but we do have an active EEG program, devoted almost exclusively to patients. We will be doing some pharmaco-EEG studies, but very few. You should explain the nature of our computer.

On the other side, I would be interested in Dr. Guidi's facility with English; a description of his training; a discussion of his aims, and especially if you think that he will be able to achieve them here. Dr. Angeleri writes that he needs an answer before June 5 to apply for a fellowship.

Thank you again. My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
