

November 18, 1977

Dear John,

Your idea to visit Jamaica is excellent. The only contact I had was with Michael Beaubrun, whom I visited in 1970 or 1971. While he gave the EEG part of his study to Korein and Karacen, we have remained friends, and I trust that he will respond to a letter from you. He is the (or was) the director of the Bellevue Hospital from which the reports emerged.

If you can see your way to return via New York, I hope you will let me know and we can reason the problem together.

I'm busy these days wrestling with ECT again. I have a number of questions which I think could be answered by yet another study, and I am planning a VA collaborative study. Otherwise, the programs here are purring along rather quietly.

My best regards.

Sincerely yours,

Max Fink, M.D.
