Richmond, Virginia

Dear Bill,

I have just returned from a very interesting and useful trip to Europe to find that our studies have gone ahead. Our first patient on AHR-1900 is now receiving 7.5 mg per day. Because we are keeping the patients on a placebo period of 2 weeks, I will need an additional 10 x 50 capsules placebo for AHR 1900. The label is attached.

As you remember, we have maintained two patients on butaperazine elixir and we would like now to transfer them to tablets. These are not available in our formulary and I have taken the first step for their approval. In the meantime, would it be possible to make 500, 5 mg tablets available? If this request is not appropriate for your office, should I call Mr. Cerner or is there another representative who you can have call on me?

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
