Dear Virgil,

The prostaglandin sessions were most interesting and I want to thank you and Peter for bringing them to my attention.

Enclosed is the marijuana pre-print you requested. The study is not yet in press.

In reviewing data in my files on the relative potency of antipsychotic agents, with a view to their use in a long acting formulation, a table of relative daily dosage ranges shows the following:

Fluphenazine	Prolixin	5-40 (mg)
Butaperazine	Repoise	10-60
Trifluoperazine	Stelazine	15-40
Thiothixene	Navane	10-40
Haloperidol	Haldol	15-45
Reserpine	Serpasil	2-4

I have selected representative drugs of different chemical classes from a larger table.

We look forward to hearing from you.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
