St. Louis, Missouri 63139

Dear Jovan:

At the ECDEU meetings, you delivered the EEG data cards and a protocol for the Mellaril Dexedrine, placebo study in disturbed children; with a request that we suggest additional analyses. To get a better idea as to what has been done, you recommended I discuss the data with Dr. Huque.

I did so today, and was told he has completed t-tests, discriminant function, regression, stepwise regression; and d² analyses. He does not have a copy of the report, but recalls being able to discriminate drug effects. He also recalls correlational analyses using behavioral variable with the EEG.

Before recommending a data analysis, it would be useful to have the reports of the previous analyses, for a sample replication of analyses would serve little useful purpose. If you lack the reports, perhaps Turan has copies in his files; or, even they may still be at MIP.

I will hold further processing until I hear from you.

My best regards.

Sincerely yours,

Max Fink, M. D.
Professor of Psychiatry
