Dear Dargut,

With regard to the proposed VIII international symposium on Clinical Neurophysiological Aspects of Psychopathological Conditions, I regret that my associates and I do not have new data which would be suitable for presentation at the next meeting. We recently set up a new laboratory based on the HZI brain mapping system (developed by Turan Itil) and we are studying the CNS changes occurring in patients receiving convulsive therapy. If we are successful in our findings, we will be happy to present our data at the next symposium.

Good luck in your work. My best regards.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
