

MEMORANDUM

January 14, 1972

TO: Alfred Freedman
FROM: Max Fink
SUBJECT: Study at Montrose V.A.

Andy Don is interested in beginning some psychopharmacology studies. The attached protocol examines the relation of EEG, blood level, and behavior of butaperazine in schizophrenia.

The protocol has been accepted by Dr. Harris and Dr. Rackow, and I am writing to obtain the cooperation of the chemists at A. H. Robins for the blood studies.

Are there any other steps necessary?
