Dear Sir:

During the past year we have established a number of clinical research programs focussed on understanding the impact of drug treatment on brain function and behavior. Primary emphasis has been placed on patients in our Mental Health Clinic who are now receiving a variety of new psychotropic drugs.

In a parallel program, we are establishing an evaluation of convulsive therapies utilizing some of the more advanced quantitative techniques for estimating changes in brain function and behavior.

In both these programs we are now considering applications for full time staff members.

If this opportunity interests you, would you please send me a copy of your curriculum vitae and call my office (369-7900) for an appointment.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
